

Mobile your meal

Supervised by:

- Dr/Ehab Rushdy
- Dr/Osama El-Komy
- Eng/Mahmoud Mahdi

Objectives:

- * Solving problems of restaurant's hustle .

* Save time & cost, and prevent overlapping in orders.

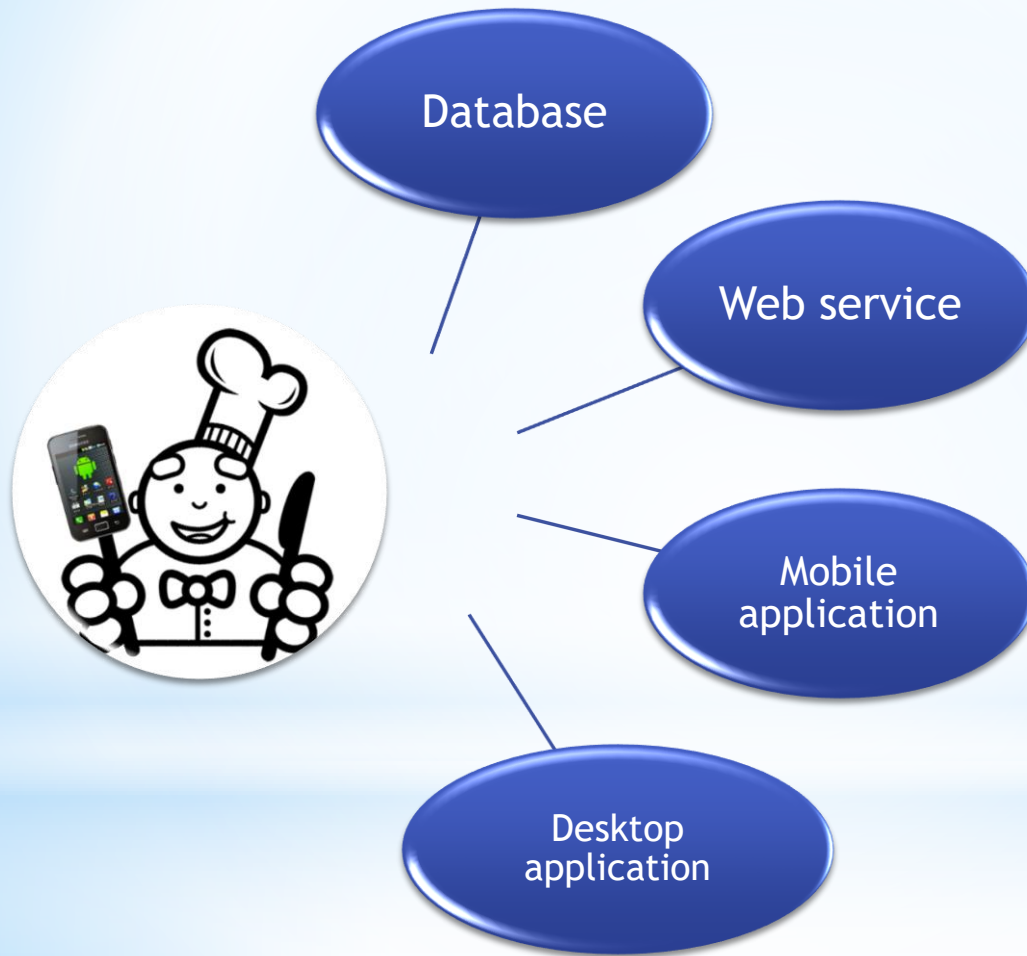

structure:

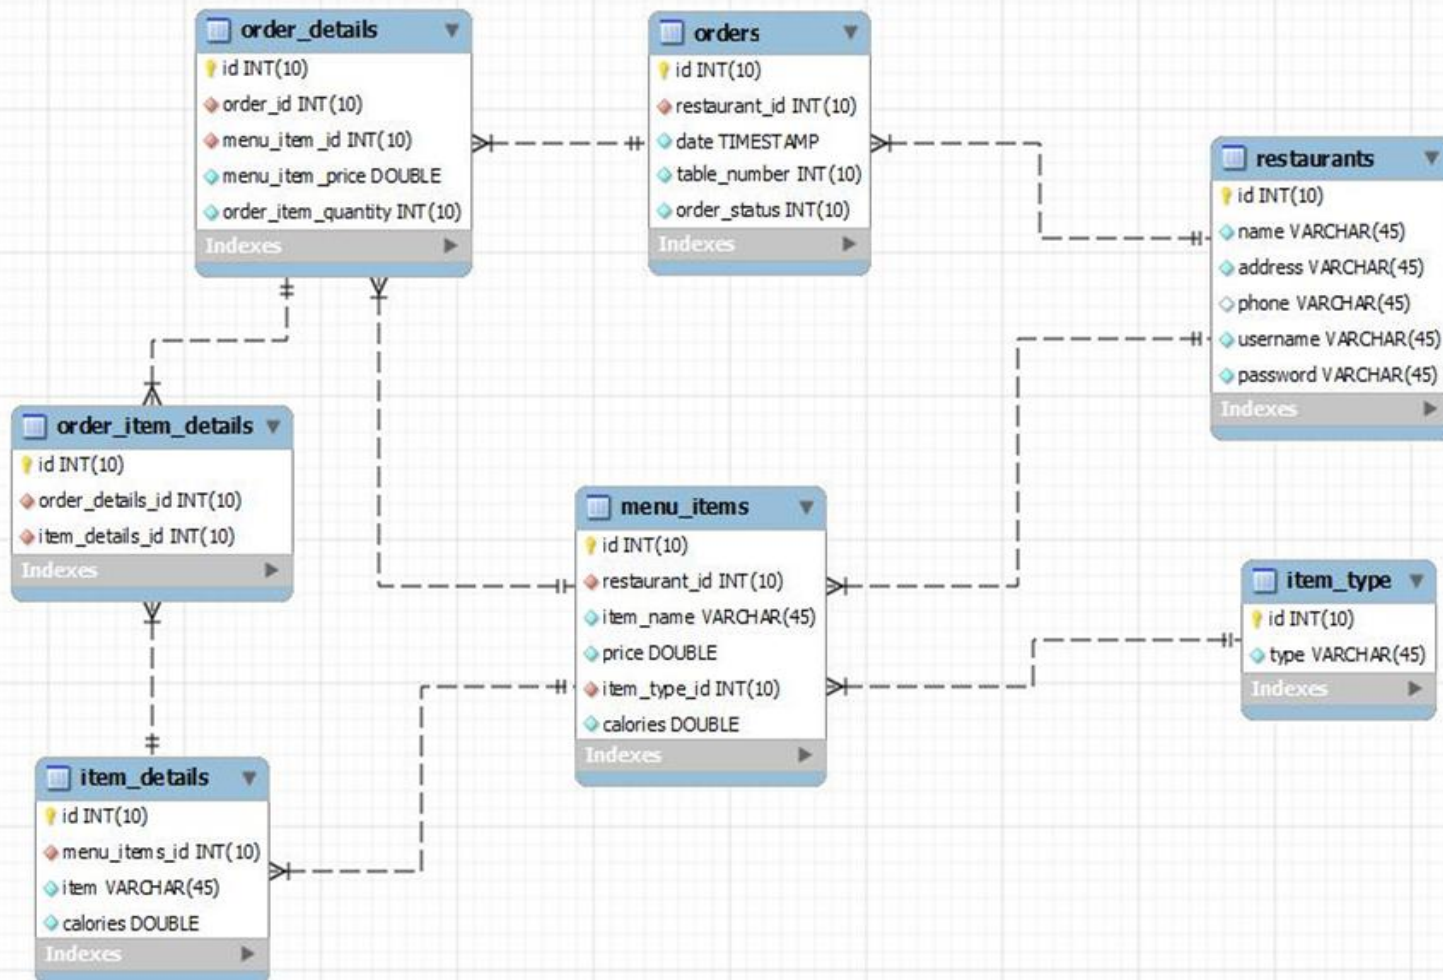

Tools:

Steps of work

Database

Web service

- * Web service allows communication between desktop application (restaurant) and mobile application(user).
- * It connects to database and get all information about restaurant that help user to make order.

Mobile application

- * connecting web service.
- * Getting information from database.
- * user can make order using these information.

Desktop application

- * Enabling restaurant workers to know the orders.
- * Updating restaurant menu.

Conclusion

- * It is an effective tool and easy program for all users that solve most problems resulting in restaurants.
- * Our program is going to be used inside restaurant.

Future work

- * providing a mobile system to enable booking from outside the restaurant.
- * determining the next time to eat for diabetics.

Thank you 😊
